Projects

AI Resume Bulter

- AI Resume Builder is a web application that helps users create professional and ATS-friendly resumes automatically. Users enter their personal, educational, and professional details, and the system generates a well-formatted resume using AI-based suggestions.

Hand Tracking System

- Hand Tracking System is a computer vision application that detects and tracks hand movements in real time using a webcam. It identifies hand landmarks (fingers, palm positions) and converts hand gestures into system actions.

E-Commerce Website by Using django

- This project is a web-based online shopping platform developed using the Python Django framework. Customers can browse products, add items to the cart, place orders, and make payments online. Administrators can manage products, categories, orders, and users through the admin panel.
